1 Folder Contents

```
Comments_01.alan
Comments.alan
identifiers.alan
NumberOverflow.alan
output.alan
README.pdf
strings_02.alan
strings.alan
test.py
tests.json
trivial.alan
```

2 Setup

Copy the folder into the root: thus `src/ sub/ bin/ tests/`. This script utilises python and the rich package. On ubuntu you can install it with

```
sudo apt install python3 python3-pip
pip3 install rich
```

Making sure that the file is executable is also necessary

```
cd <PROJECT DIR>/tests
chmod +x test.py
```

Then the program should work.
